

Limitorque[®] HBC Series Worm Gear Operators

Proven in the most demanding situations

Experience In Motion

Flowserve Limitorque HBC Series: A worm gear drive capable of manual or motorized operation

Limitorque's HBC series worm gear operators excel in diverse applications. Their dependability has been proven in the most demanding situations, ranging from nuclear power plants, to large damper operations, to power plant flue gas desulphurization. Equipped with a handwheel, the HBC can be used to manually operate butterfly, plug, and ball valves. Combined with a Limitorque electric actuator (such as the SMB, L120, or MX), the HBC provides powerful and responsive motorized operation. These combination actuators provide a wide range of output speeds and output torques to 93,000 ft-lb (126,100 N m). HBC operators feature an optional 360° worm gear for use in guillotine damper and radial gate applications. Whether manual or motorized, depend on the HBC for easy valve control — even in tough installations.

HBC – over 40 years of proven effectiveness in a wide range of applications, including:

Nuclear and fossil fuel power generation

The HBC has been successfully tested in conjunction with the SMB electric actuator to IEEE standards for environmental and seismic conditions for nuclear plant service. Whether inside containment in safety-related applications or installed on flue gas desulphurization systems or large diameter butterfly valves in fossil fuel power plants, the rugged and reliable HBC delivers outstanding performance year in and year out.

Petroleum refining and transmission

HBCs are at work in these quarter-turn valve applications, providing consistent, worry-free operation. In the plant or on pipelines in any climate, the HBC is suited to a broad range of service conditions and temperatures from extreme cold to the desert heat.

Water and wastewater treatment

HBC worm gear operators are found in these applications where specifications demand a product with a long history of dependable operation under severe and critical service conditions. The demonstrated excellence in design and functionality make the HBC the operator of choice when nothing less than proven reliability is required.

The HBC provides key advantages for quarter-turn actuation

- Enables manual operation
- Adapts multi-turn actuators to quarter-turn applications
- Covers a wide variety of output speeds and torques

Spur gear attachments increase your options

The HBC can be equipped with an optional spur gear attachment to further reduce input torque requirements—making it possible to operate even high-torque valves with a handwheel. Motorized applications can also incorporate spur gear attachments to reduce input torque requirements, allowing the use of smaller, less costly actuators to operate the valves.

To achieve specific operating/stroke times, please inquire about alternate spur gear ratios that are available for many larger valve applications.

Expand control capabilities with motorized operation

The HBC can easily handle valve positioning and modulating tasks when matched with a Limitorque electric actuator such as the L120, SMB or MX.

The HBC is used not only in quarter-turn applications, but can be provided with a 360° output for use with manually operated and motorized multi-turn devices such as guillotine dampers and radial gates.

Anatomy of the HBC Series

The HBC manual operator has an alloy steel worm shaft and a bronze worm gear. Buried and submersible operators are equipped with non-corrosive input shafts.

On all operators, except for buried service, a valve position pointer is provided as a standard feature. Handwheels are optional and can be furnished in various sizes.

All operator sizes can be supplied with factory-mounted Limitorque electric valve actuators or can be readily converted to motor operation in the field using Limitorque electric actuators.

The speed of operation for butterfly, plug, or ball valves when motor-operated can be varied over a broad range, limited only by motor speed and available gear ratios.

All HBCs are built to meet AWWA requirements. AWWA input limit stops are available for non-motorized applications.

Valve position pointer makes it easy to check position at a glance.

Bronze worm gear teams with an alloy steel worm shaft for rugged reliability.

Strong cast-iron housing—tough enough to withstand buried and submersible service applications.

HBC-0 through -3
with optional handwheel

HBC-4 through -7

Adjustable mechanical stop enables users to accurately set valve travel limit.

Rotating components supported by low-friction bearings.

Combines with Limitorque electric actuators for enhanced capabilities

HBC-5/SGA/SMB-00

(All SMB actuators can be mounted to the HBC manual operators.)

HBC-3/SGA/L120-20

(All L120 actuators can be mounted to the HBC manual operators.)

HBC-3/MX-10

(All MX actuators can be mounted to the HBC manual operators.)

Flowserve Corporation has established industry leadership in the design and manufacture of its products. When properly selected, this Flowserve product is designed to perform its intended function safely during its useful life. However, the purchaser or user of Flowserve products should be aware that Flowserve products might be used in numerous applications under a wide variety of industrial service conditions. Although Flowserve can (and often does) provide general guidelines, it cannot provide specific data and warnings for all possible applications. The purchaser/user must therefore assume the ultimate responsibility for the proper sizing and selection, installation, operation, and maintenance of Flowserve products. The purchaser/user should read and understand the Installation Operation Maintenance (IOM) instructions included with the product, and train its employees and contractors in the safe use of Flowserve products in connection with the specific application.

While the information and specifications contained in this literature are believed to be accurate, they are supplied for informative purposes only and should not be considered certified or as a guarantee of satisfactory results by reliance thereon. Nothing contained herein is to be construed as a warranty or guarantee, express or implied, regarding any matter with respect to this product. Because Flowserve is continually improving and upgrading its product design, the specifications, dimensions and information contained herein are subject to change without notice. Should any question arise concerning these provisions, the purchaser/user should contact Flowserve Corporation at any one of its worldwide operations or offices.
