

RCU II+

RCU II+ is a driver/operator interface to increase facility security through greater access control and visibility. With a fully integrated card reader and keypad, RCU II+ adds a critical layer of protection for any facility.

CONFIDENTLY SECURE YOUR FACILITY

RCU II+ empowers you to know and control who is coming and going at your facility. This driver interface controls access to entry and exit gates, load racks, BOL request stations, staging areas, and more. RCU II+ is more durable and easier to use than ever before.

PROBLEM

Transaction management systems are commonplace at most facilities, giving owners a clear idea of how product is flowing in and out. However, many want a better way of tracking the flow of people entering and exiting the facility.

SOLUTION

RCU II+ provides a simple solution for knowing exactly who entered/exited the facility and when. This also prevents unauthorized drivers from gaining entry. Toptech's TMS can support customized prompts via the RCU II+ for entry of account number, order number, truck number, language selection and other critical information required at the facility.

ENSURE YOUR FACILITY IS WITHIN TWIC COMPLIANCE

The RCU II+ is an integral component of Toptech's TMS terminal management system and Multiload load rack control. In addition, the RCU II+ can be incorporated with other control systems where a reliable user-interface device is needed.

TMS uses the RCU II+ to control access to entry and exit gates, load racks, BOL request stations, and more. Optional I/O control is available. Toptech's TMS is capable of supporting customized prompts via the RCU II+ for entry of account number, order number, truck number, language selection and other critical information required at your facility.

INCREASE THE SAFETY OF YOUR FACILITY

INCREASED SECURITY AND SEAMLESS INTEGRATION

SECURE YOUR FACILITY

RCU II+ has the ability to connect to 3rd party TAS systems and utilize open protocol to control who can enter and exit the facility. The RCU acts as a driver/operator HMI to capture and validate their information before accepting or denying entry. A driver presents their card at the RCU and can be prompted to enter a pin code. If the card and/or pin does not match with an authorized driver, then the driver/card will be denied access. Additionally, TMS can raise alarms or e-mail appropriate personnel with this information.

DURABLE & EASY TO USE

The RCU II+ is more durable than ever before, equipped to withstand even more corrosive environments. Additionally, RCU II+ has an improved user interface, sure to make entering a facility faster and easier. The keypad is comprised of a chemical resistant silicone with field-proven durability and has tactile feedback for the best user experience.

GLOBAL SOLUTION

To support international customers, Toptech has designed multilingual driver interfaces, including English, Spanish, and French. TMS users can also easily configure the RCU II+ device for other languages.

AN INDUSTRY LEADER IN AUTOMATION AND DATA MANAGEMENT

Toptech Systems is a global industry leader in automation and data management services. All of our products are designed in-house allowing us to provide excellent customer service to our clients at all levels of the supply chain.
