# MULTILOAD II SMP

Multiload II SMP handles single-arm, straight product loading. SMP offers ease of use, powerful stand-alone operation, seamless integration with automation systems, and an array of powerful features.

A PRACTICAL SOLUTION FOR TRANSACTION DATA

Multiload II SMP is ideal for markets that don't need the more extensive feature set of the standard Multiload II preset but still want a powerful reporting tool. SMP collects all transaction data which can be used through extensive built-in reports, the cloud-based UAP system, and/or TMS or most other terminal automation systems.

PROBLEM

Many sites with simple operations and/or spotty to no internet access are stuck with manual processes, no automatic reporting, and no real security to help manage their business.

Additionally, those sites often have presets without enough space inside the enclosure, making it hard to perform basic maintenance. Plus, expensive firmware upgrades mean missing out on helpful new features.

SOLUTION

Multiload II SMP enables simple operations to enjoy the benefits of a preset that tracks transactions with or without internet, provides powerful reporting, and allows you to control who has product access.

The innovative SMP design provides a spacious interior for easy maintenance. In addition, firmware upgrades are free so you can benefit from the newest enhancements.
